This torrent file was hosted at Free Software BBS and was created on Sep 17, 2014. Q: Cannot login to zsh, but works in other shell I can successfully login to zsh by entering my user name and password, then I get a welcome message but when I want to open the terminal it says permission denied. I'm logged in via SSH in the same way I did on another server. A: Have you checked your ~/.profile and ~/.zlogin files? They determine whether you'll use the login shell as well. If they are empty, you get the same behavior as with bash. If they contain a line with export PATH=/usr/local/bin:/usr/bin:/bin, you get bash behavior. If they contain another environment definition, zsh behavior applies. You need to check if you have set your ZSH\_AUTO\_LOGIN environment variable. If this is set to no, it will be turned off. Q: In which case, I can override the equals and hashCode method? I had recently read a article. It is said that hashCode and equals method are overridden in case the class has a common ancestor, because then there can be 2 instances of the class with same value. In which case, it is mentioned 82157476af
